Full-stack deweloper
GoIT - 2024
(React, Java Script)

Web Development
Media College Denmark
Vocational education and training (2024–2026)
Full-stack development,
UI/UX design

EDUCATION

Media College Denmark 2024 - 2026

- HTML, Tailwind CSS, Bootstrap, React — building modern, responsive, and user-friendly interfaces.
- Git/GitHub — version control and collaborative work in team projects.
- JavaScript, MongoDB, Postman — basic backend development for full-stack projects.
- UI/UX - design
  self-driven skill development, creating prototypes and wireframes in Figma.
- Adobe Creative Cloud
  (Photoshop, Illustrator, InDesign) — creating graphic elements and visual assets for the web.

EXPERIENCE

I am currently completing the final phase of my vocational education. During my studies at college, I gained my first practical experience working as a full-stack web developer.

I worked on building modern UI for both group projects and individual projects, using React, Bootstrap, and Tailwindcss, as well as JavaScript to implement dynamic web application logic.
All projects were developed according to defined technical requirements and objectives. Examples of my study projects are available in my portfolio, with additional projects published on GitHub.

I gained practical experience in the field of B2B e-commerce and basic SEO. I worked on an educational project — a B2B webshop platform called "Gusto Vino", built with WordPress and WooCommerce and tailored to specific business requirements. I contributed to configuring the product catalog, payment logic, taxation, and shipping, as well as scaling the solution to support large order volumes and logistics processes.

During my internship at the web agency "SUPEREGO", I gained hands-on experience working with Sanity CMS, TypeScript, and Next.js, and had the opportunity to apply my technical skills in real client projects.

I have a strong interest in UI/UX design and continuously develop these skills independently. For interface design and wireframing, I use Figma as well as tools from Adobe Creative Cloud.
